

Deploy an Ubuntu Server 24.04 Virtual Machine in Microsoft Azure

Summary:-

In this lab, you will deploy an Ubuntu Server 24.04 virtual machine in Microsoft Azure. You will configure the virtual machine, networking, authentication, and supporting Azure resources. After deployment, you will verify that the VM and all associated resources have been created successfully.

Let's Start:-

In this lab, you will:

- Create an Ubuntu Server 24.04 virtual machine.
- Use an existing Azure Resource Group.
- Configure VM size and authentication.
- Create the required networking resources.
- Deploy the virtual machine.
- Verify the deployed Azure resources

Lab Steps

Step 1 – Create a Virtual Machine

- Sign in to the **Azure Portal**.
- In the search bar, search for **Virtual Machines**.
- Select **Virtual Machines**.

- Click **Create** → **Azure Virtual Machine**.

Step 2 – Configure Basic Settings

- Configure the following settings.

Setting	Value
Subscription	[Your Azure Subscription]
Resource Group	Select an existing Resource Group
Virtual Machine Name	web-dev-eus-01
Region	East US
Availability Options	No infrastructure redundancy required
Image	Ubuntu Server 24.04 LTS - x64 Gen2
Size	Standard_B1s

Availability options ⓘ No infrastructure redundancy required

Security type ⓘ Trusted launch virtual machines
[Configure security features](#)

Image * ⓘ Ubuntu Server 24.04 LTS - x64 Gen2
[See all images](#) | [Configure VM generation](#)

VM architecture ⓘ
☐ Arm64
☒ x64

Run with Azure Spot discount ⓘ ☐

Size * ⓘ Standard_D2ds_v7 - 2 vcpus, 8 GiB memory (₹9,899.33)
[See all sizes](#) | [Customize cores](#)

Step 3 – Configure Administrator Account

- Configure the administrator credentials.

Setting	Value
Authentication Type	Password
Username	Enter an administrator username
Password	Enter a strong password
Confirm Password	Re-enter the password

< Previous **Next: Disks >** Review + create [Give feedback](#)

- Leave the remaining settings unchanged.
- Click **Next: Disks**.

Step 4 – Configure Storage

- Keep the default disk configuration.
- Click **Next: Networking**.

OS disk type *

Delete with VM ☒

Key management

Enable Ultra Disk compatibility ☐
 Ultra disk is supported in Availability Zone(s) 1,2,3 for the selected VM size Standard_D2ds_v7.

Data disks for web-dev-eus-01

You can add and configure additional data disks for your virtual machine or attach existing disks. This VM also comes with a temporary disk.

LUN	Name	Size (GiB)	Disk type	Host caching	Delete with VM
-----	------	------------	-----------	--------------	----------------

Step 5 – Configure Networking

- Verify or allow Azure to create the required networking resources.
 - Virtual Network
 - Subnet
 - Public IP Address
 - Network Security Group

Microsoft Azure

Step 6 – Review and Create

- Click **Review + Create**.
- Wait until validation completes successfully.
- Review the configuration.

- Click **Create**.

Azure begins deploying the Ubuntu virtual machine and the required networking resources.

Step 7 – Verify the Deployment

After the deployment completes:

- Open the deployed Virtual Machine.
- Verify that the VM status is **Running**.
- Open **All Resources** from the Azure Portal.
- Verify that the following resources have been created:
 - Ubuntu Virtual Machine
 - Virtual Network
 - Subnet
 - Public IP Address
 - Network Security Group
 - Network Interface
 - OS Disk

Verification

Verify that:

- The Ubuntu Server 24.04 virtual machine is successfully deployed.
- The VM status is **Running**.
- A Virtual Network and Subnet are created.
- A Public IP Address is assigned.
- A Network Security Group is created.
- A Network Interface is attached to the VM.
- An OS Disk is attached to the VM.
