

Upload Files to Azure Blob Storage

Summary:-

In this lab, you will upload files to an existing Azure Blob container, edit uploaded files, organize files into folders using the Advanced upload options, and verify the uploaded content. You will upload different file types, including code, image, and CSV files, to understand how Azure Blob Storage manages and stores blobs.

Let's Start:-

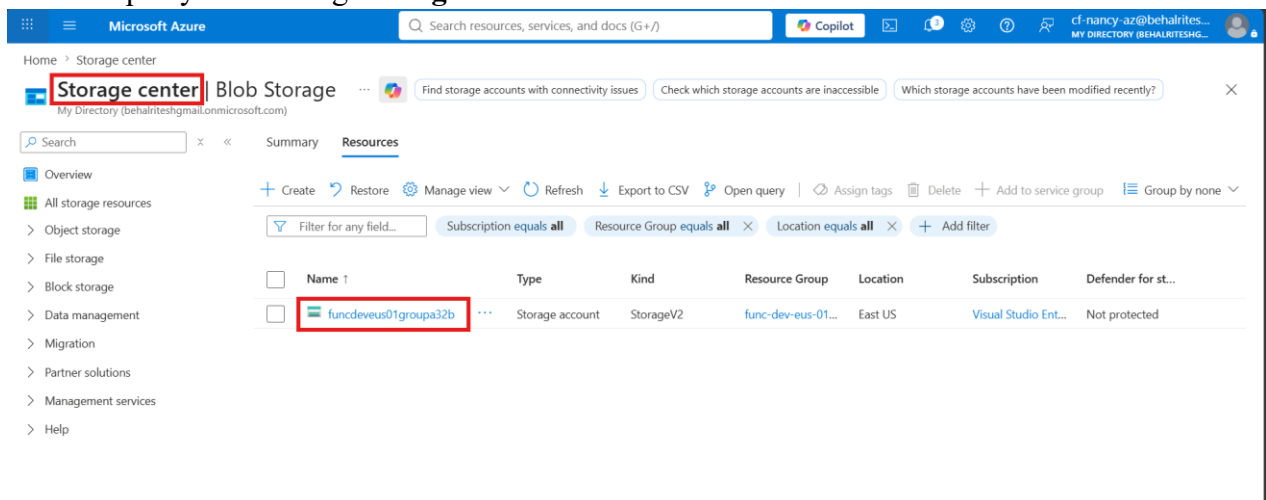

After completing this lab, you will be able to:

- Upload files to an Azure Blob container.
- Create a new container during file upload.
- Edit uploaded files using the Azure portal.
- Upload files to specific folders using the Advanced upload options.
- Verify and manage uploaded blobs.

Lab Steps:-

Step 1 – Open the Blob Container

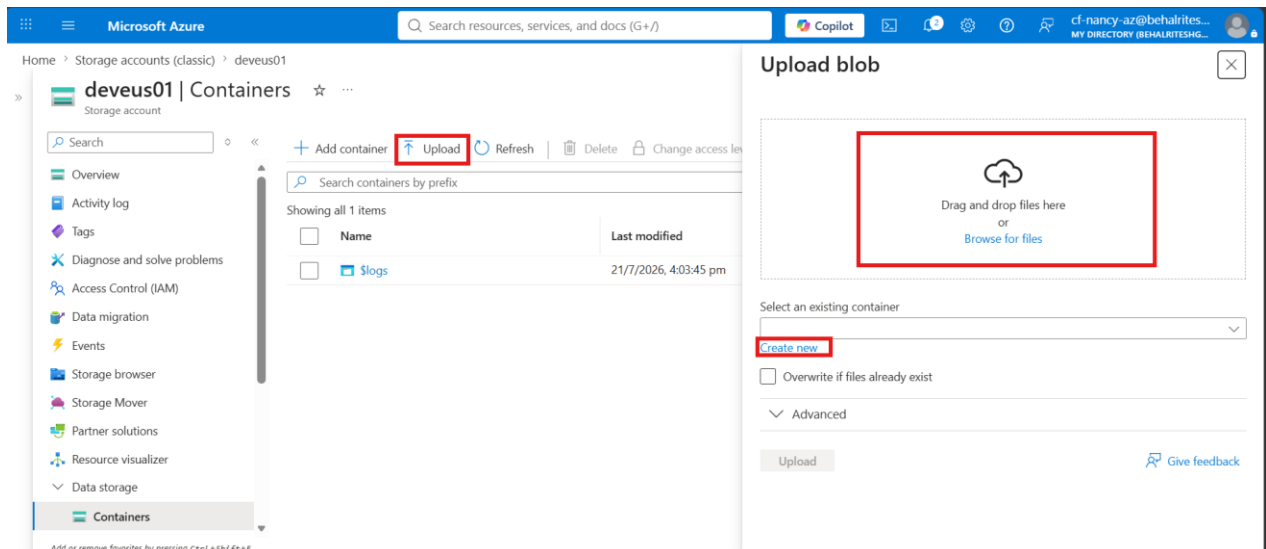

- Sign in to the Azure portal.
- Open your existing **Storage Account**.

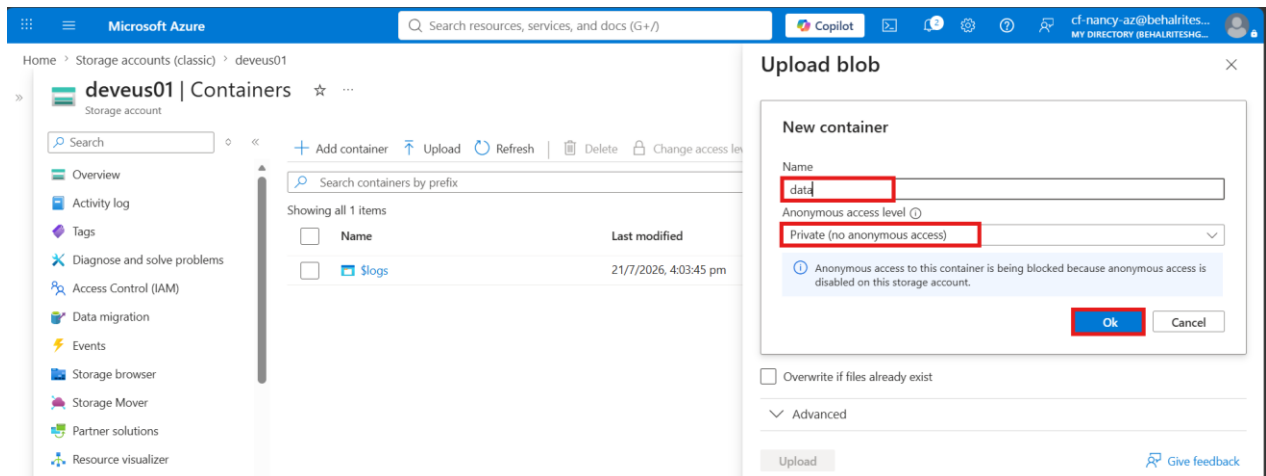

- From the left pane, select **Containers**.
- This step opens the Blob container where files will be uploaded.

Step 2 – Upload a File

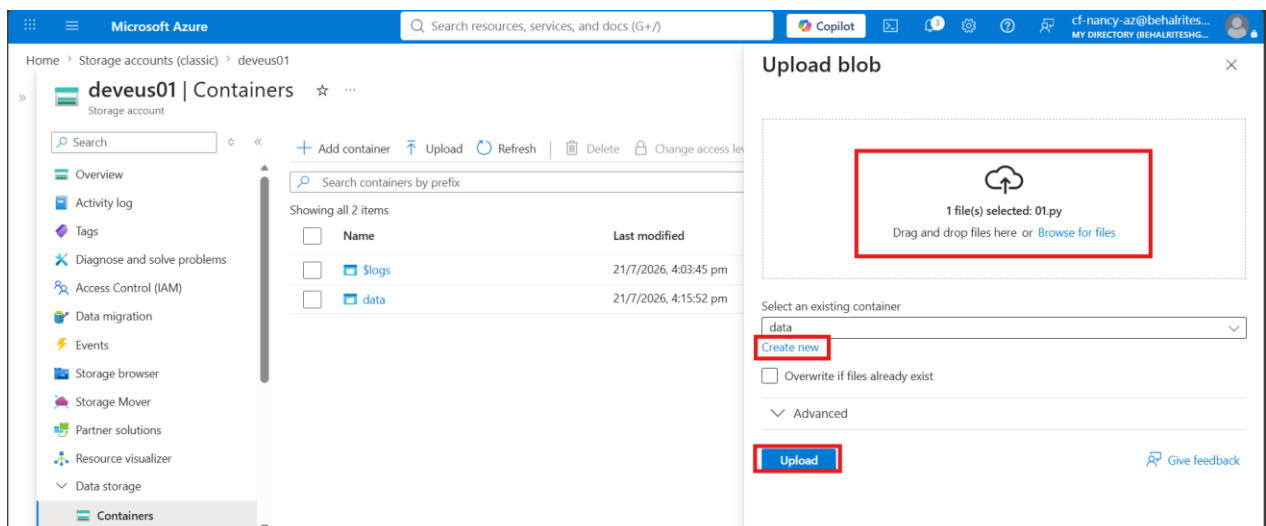

- Click **Upload**.

- Click **Create new** to make a **new container**.

- Click **Browse for files**.

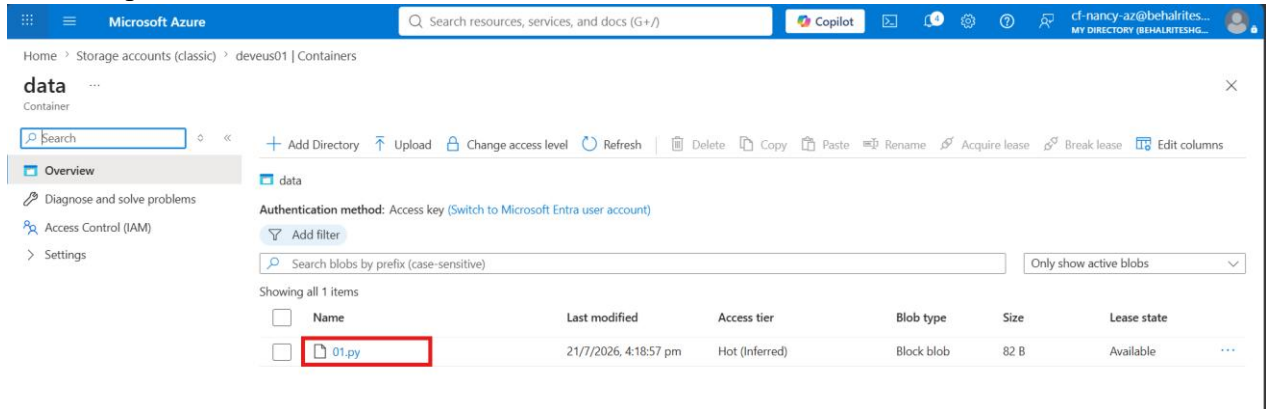

- Select a **file** from your local computer.

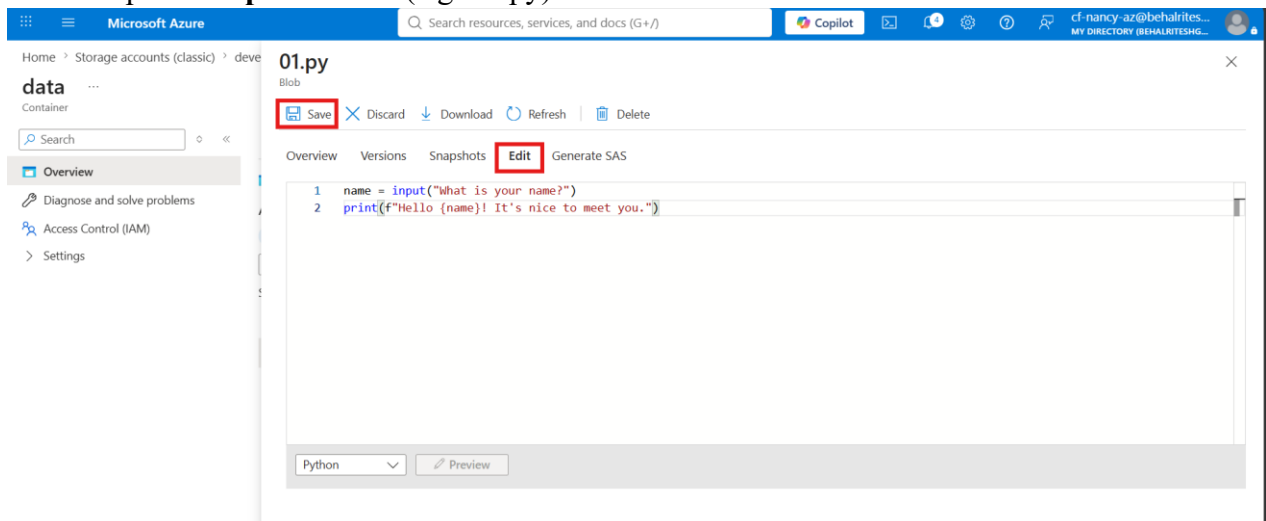

- Click **Upload**.
- Wait for the upload to complete successfully.
- This step uploads the selected file as a blob to Azure Storage.

Step 3 – Edit the Uploaded File

- Open the **data** container.

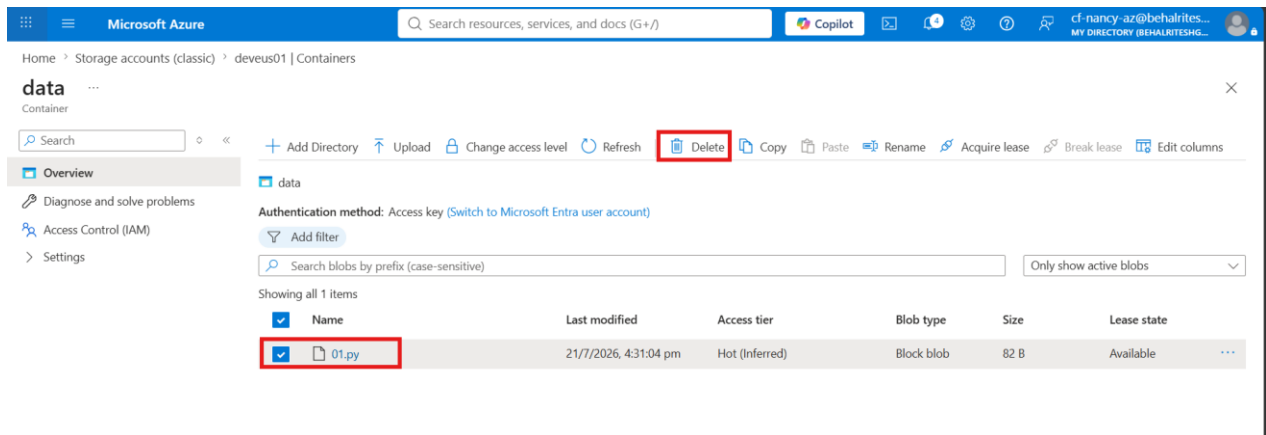

- Open the **uploaded file**(e.g. 01.py).

- Click on **edit**.
- **Edit** the file(if required). Click **Save**.
- This is the **storage service** for **Code**.

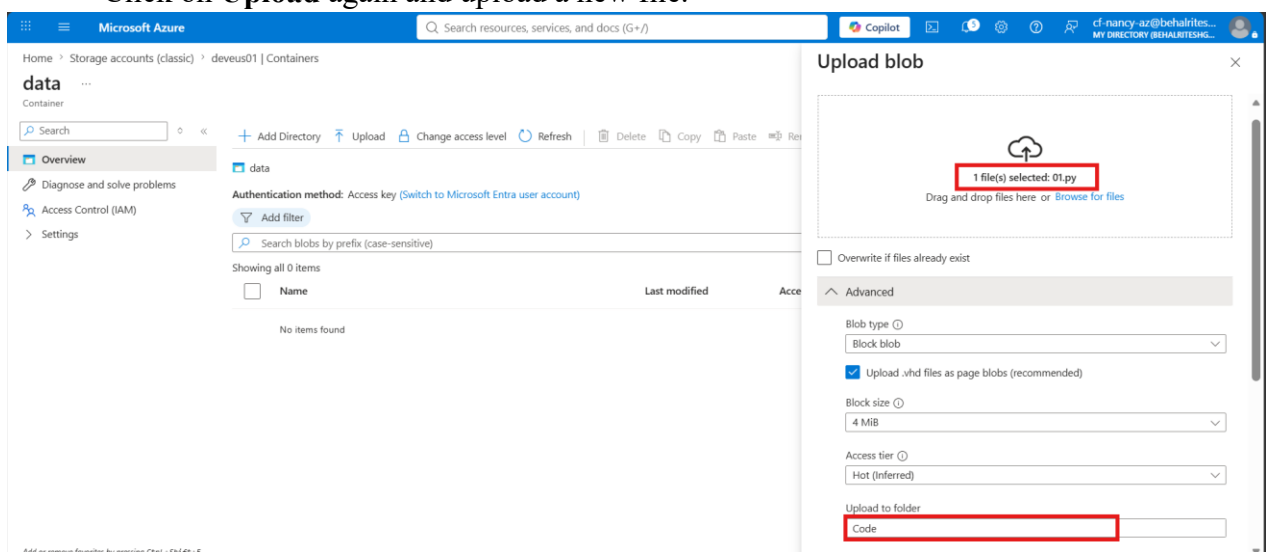

Step 3 – Upload the file using Advanced Drop-down

- Delete the uploaded file.

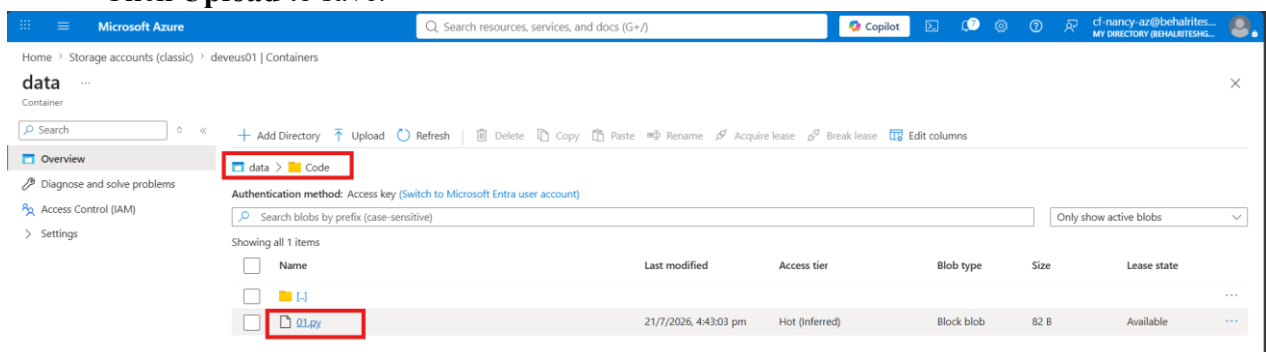

1. Upload a Code file

- Click on **Upload** again and upload a new file.

- Click on the **Advanced** drop- down and Select:
 - Upload to folder: **Code**
- Click **Upload** to save.

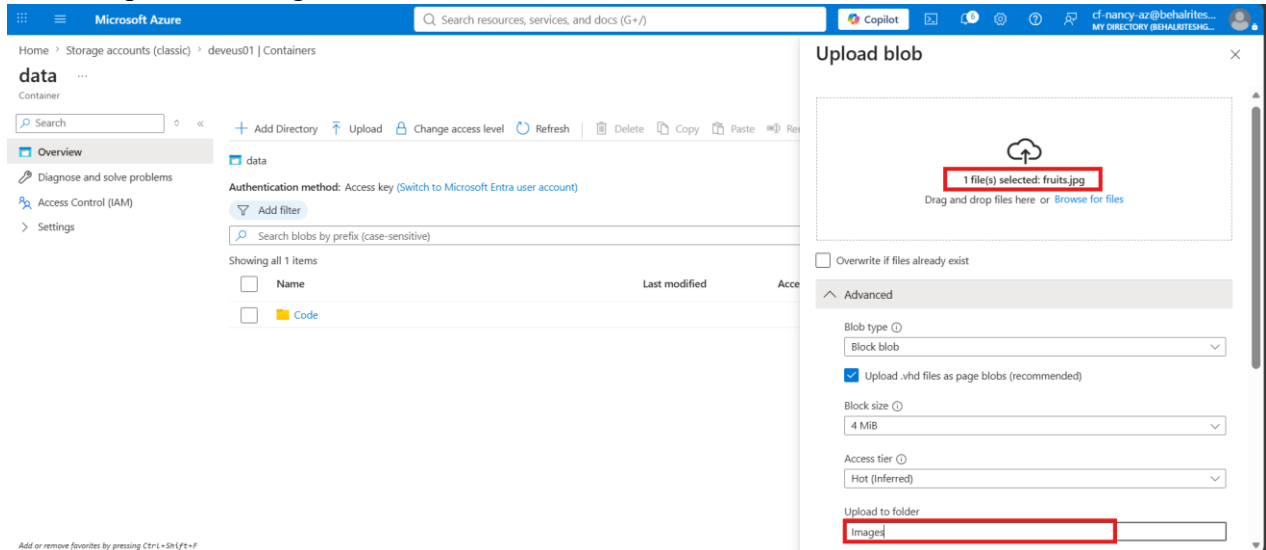

- This step uploads a code file to the Azure Blob Storage.

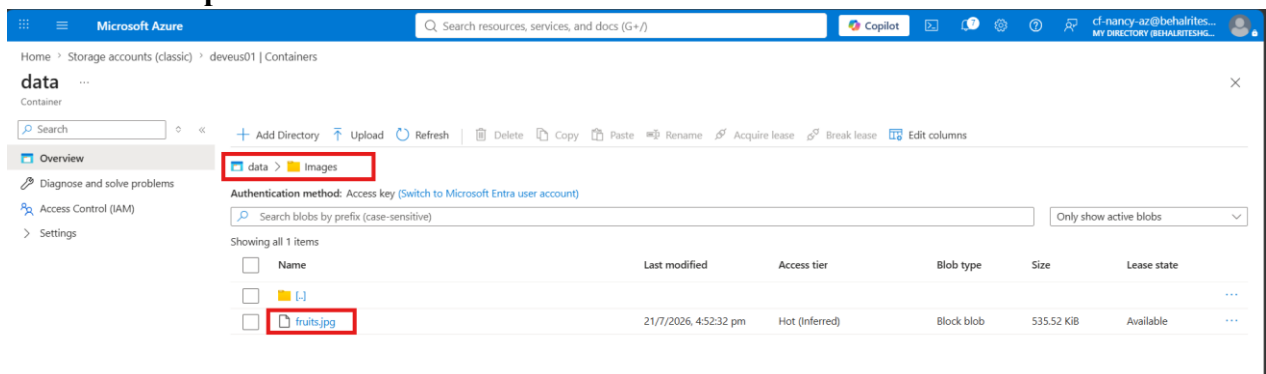

2. Upload an Image file

- Click on **Upload**.

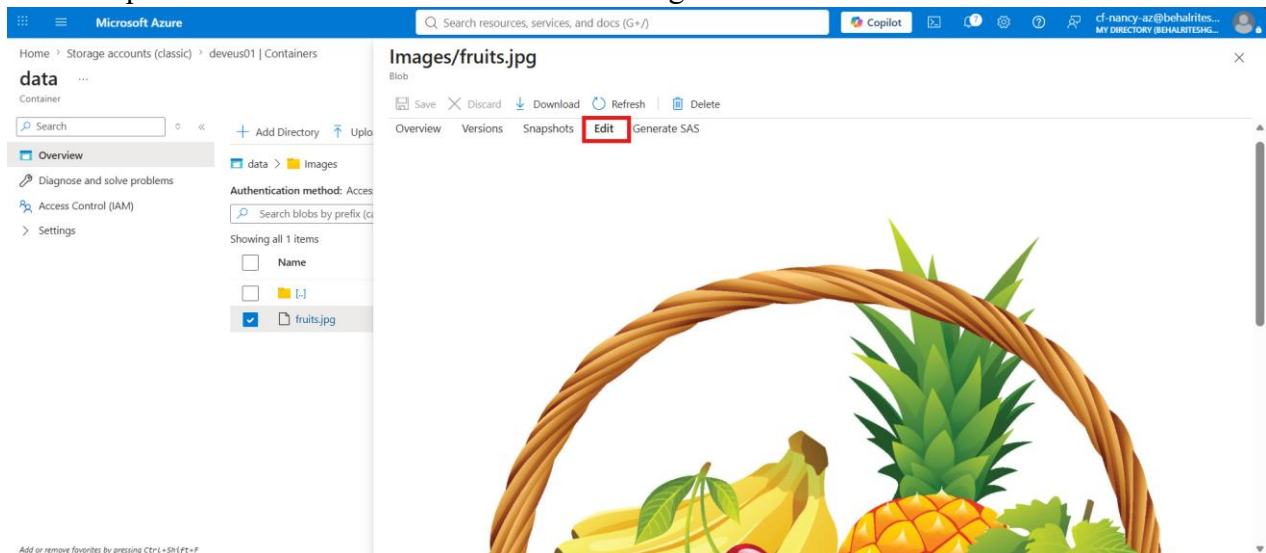

- Upload an image file.

- Click on the **Advanced** drop- down and Select:
 - Upload to folder: **Images**
- Click **Upload** to save.

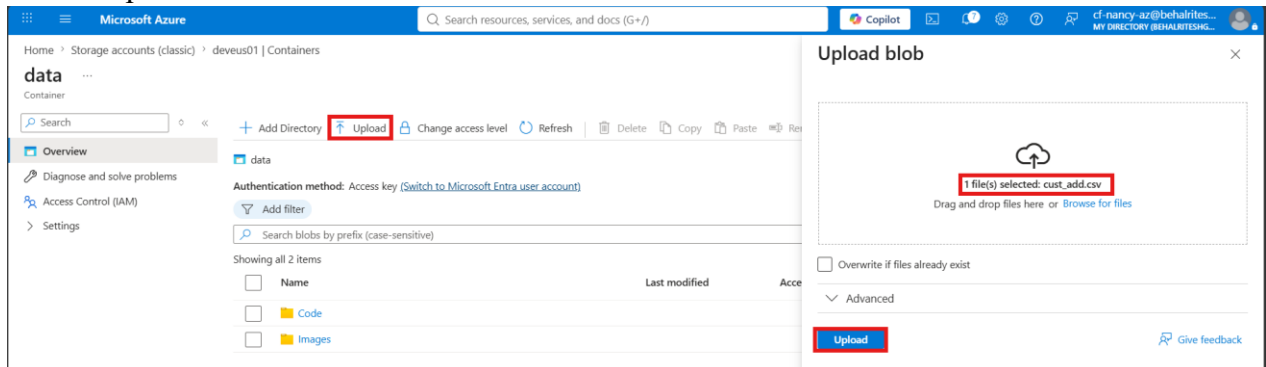

- Open this file. Click on **Edit** to edit this image.

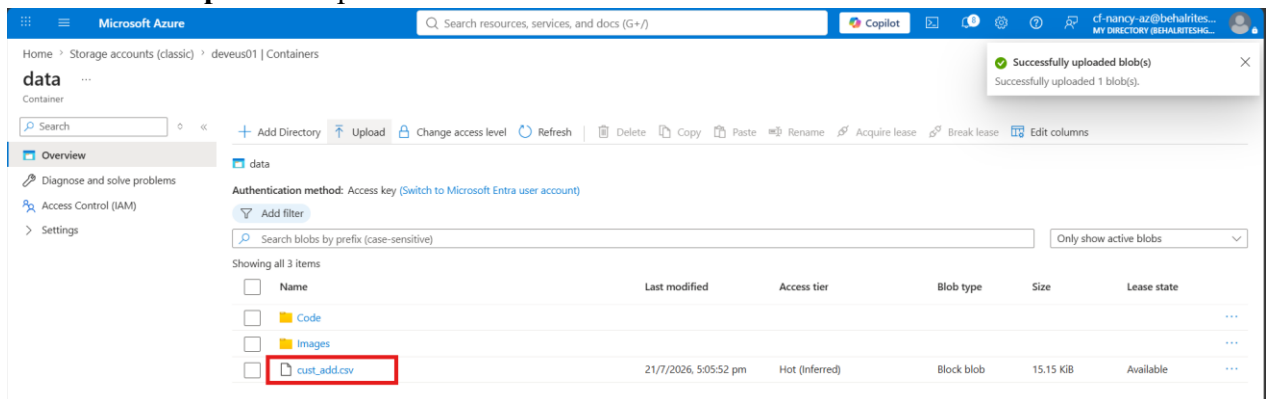

- Click on **Save** to save the changes.
- This step uploads and edits an image file to the container.

3. Upload any other file

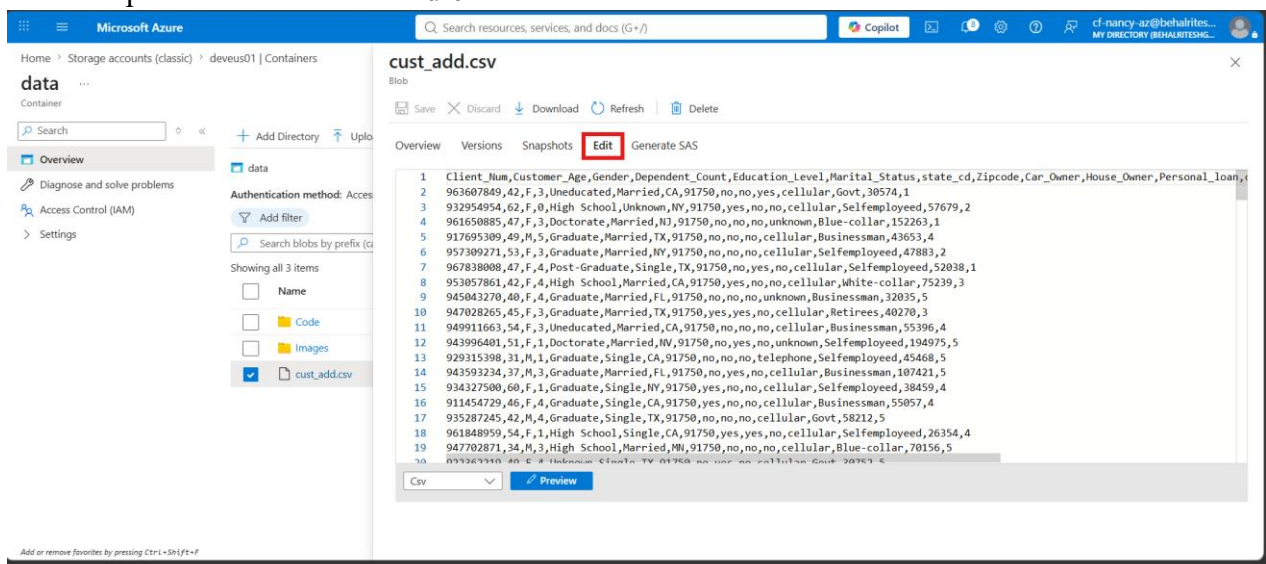

- Click on Upload.
- Upload a csv file.

- Click **Upload** to upload this file.

- Open the file. Click on **Edit** to edit this file.

- Click on **Save** to save the changes.

- This step confirms you can simply **upload a file without any advanced** options or new folder.

Verification

Verify the following:

- Files are uploaded successfully to the Blob container.
- The uploaded files can be opened and edited.
- Code and image files are uploaded to their respective folders using the Advanced upload option.
- Files uploaded without specifying a folder are stored successfully in the container.
- All uploaded blobs are visible and accessible from the Azure portal.
